Implement using RAW SOCKETS.

Aim:

To write code using RAW Sockets to implement packet Sniffing.

```
from Scapy.all import sniff
from Scapy.layers.inet import IP, TCP, UDP, ICMP

def packet_callback(packet):
    if IP in Packet:
        ip_layer = packet[IP]
        protocal = ip_layer.proto
        SRC_IP = IP_layer.SRC
        dst_IP = IP_layer.dst

protocal_name = ""
    if protocal == 1:
        protocal_name = "ICMP"
    elif protocal == 6:
        protocal == 6: name = "TCP"
    elif protocol == 17:
        protocal_name = "UDP"
    else:
        protocal_name = "unknown protocal"
```

```
# print packet details
print(f"protocol: {protocol_name}")
print(f"protocol IP: {src_ip}")
print("-"*50)

Sniff(iface='Wifi', prn=packet_callback, filter="ip",
                                    store=0)
```

Output:-

Protocol: TCP
Source IP: 57.155.141.117
destination IP: 192.168.1.6.

Protocol:
source IP: 57.155.147.117
destination IP: 192.168.1.6.

Protocol: UDP.
Source IP: 192.168.1.6
destination IP: 192.168.1.1.

Result:
The implementation of packets using raw socket implemented successfully
